

SkyEdge IV Transition to Cloud and 5G NTN

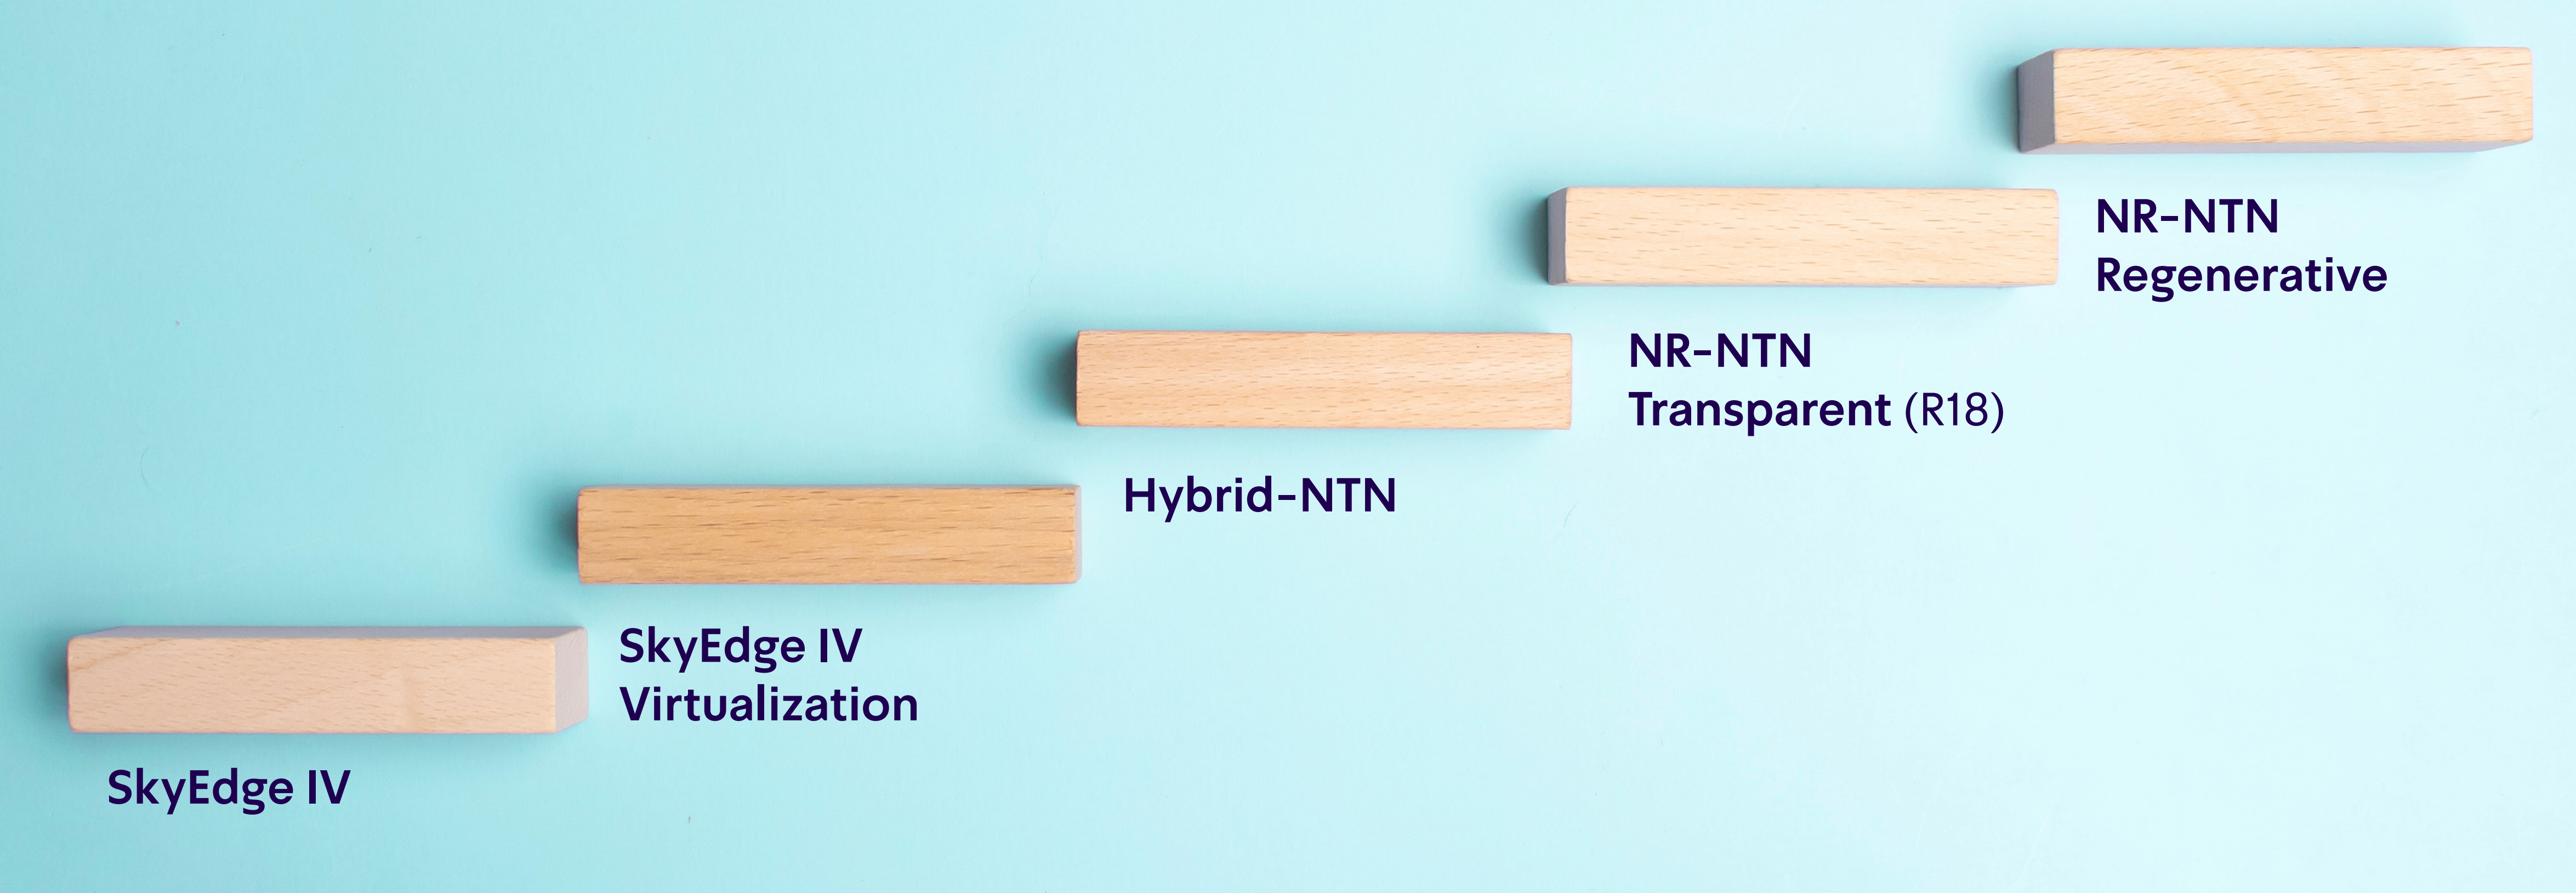

Gilat is at the forefront of 5G NTN readiness, transitioning to a virtualized all-software platform that efficiently operates on standard, off-the-shelf hardware

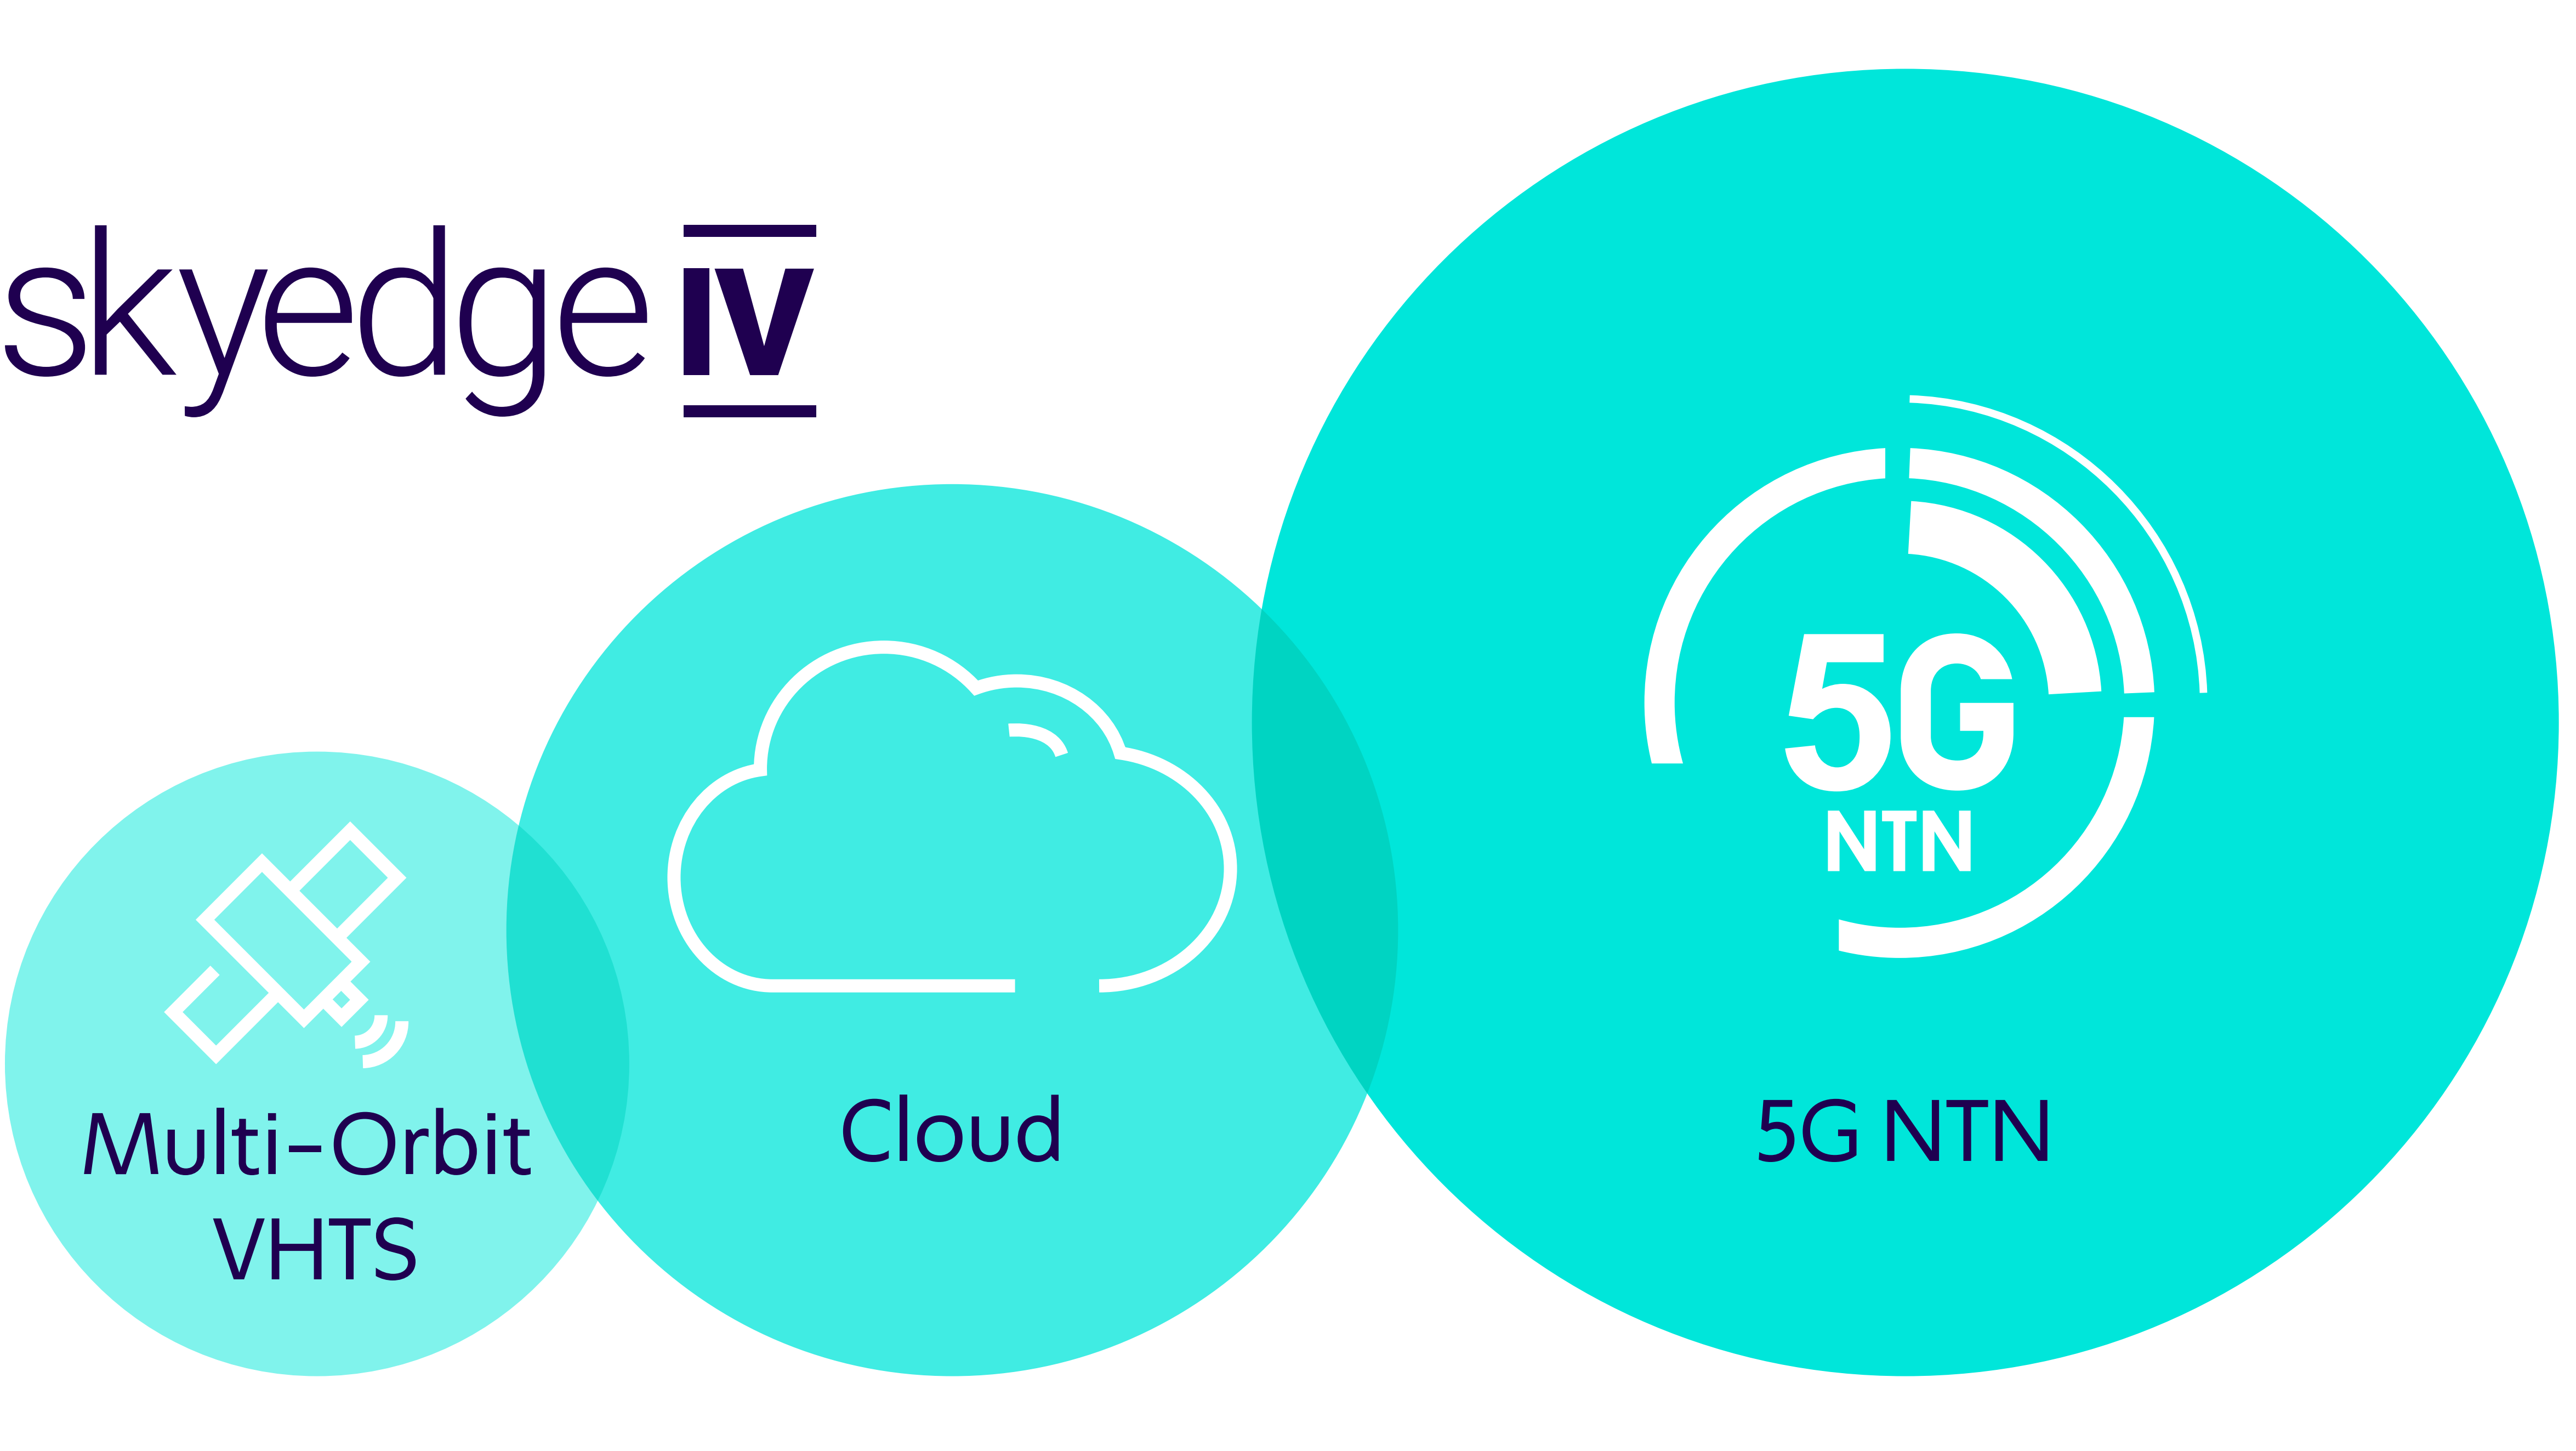

Gilat's leading SkyEdge IV platform was designed to apply future standards that ensure adaptability and integration across multiple waveforms

Gilat empowers customers to evolve strategically, preserving their current S2X investments and maintaining business operations, with a phased approach

SkyEdge IV is the proven new space revolution platform that supports multi-orbit operation and VHTS with an architecture enabling steady evolution to Cloud and 5G NTN

SkyEdge IV's Elastix Total NMS was designed for both current S2X and 5G NTN platforms
